

How to Capture Full Packets

You can take packet captures with Qosium. This is an optional feature, which can be taken completely off from the Qosium delivery. You can write Pcap files from the traffic you measure. This means that the packet trace is taken from the traffic that matches your measurement filter. You can open the Pcap file then with other packet analyzer tools. This guide demonstrates how you can perform packet capturing with Qosium Probe and Scope.
