

Launching Probe in Android

Qosium Probe agent is started with the same Qosium Probe Android Launcher that was used to install it.

Table of Contents

1. Locate the Qosium Probe application from application menu and start it.
2. Start the Qosium Probe agent by tapping the *Start* button.
3. Optionally, you can view the output of Qosium Probe agent by selecting the *Show Log* option.

An easy way of engineering the connection between Android Qosium Probe and other Qosium components, is to use the Mobile Wi-Fi hotspot feature of Android. After enabling Mobile hotspot, the Qosium measurement controllers can attach to the Wi-Fi exposed by the Android device and connect to the Qosium Probe through it.
